

## MULTIPLE BED SUPERBEDDER

There are many large growers who want to shape more than one bed in a single pass through the field. For them, we manufacture superbedders which shape two and three raised beds at a time. We also build fully custom units with four or more beds. Their practicality depends on the row center requirements and available tractor power.

An important thing to remember when considering a multiple row superbedder is the levelness of your land. A multiple row superbedder requires a very level field so that each and every bed is shaped at the same height, with the same amount of available soil. In addition, you should consider how the superbedder will follow the wheel tracks of your tractor. It is more difficult to shape a bed directly behind a tractor tire due to soil compaction.

Part #	Description
BP410	2 bed superbedder for 6 ft (1.8 m) row centers
BP411	2 bed superbedder for 5 ft (1.5 m) row centers
BP414	2 bed superbedder for custom row centers
BP420	3 bed superbedder for 6 ft (1.8 m) row centers
BP421	3 bed superbedder for 5 ft (1.5 m) row centers
BP424	3 bed superbedder for custom row centers
BP425	3 bed superbedder for 6 ft (1.8 m) row centers, with 6000 lb (2727 kg) fertilizer distributor
BP426	SS 3 bed superbedder for 6 ft (1.8 m) row centers, with 6000 lb (2727 kg) fertilizer distributor

Press pans for superbedders are sold separately. All standard superbedders are fabricated to fit standard three-point Category II hitches. Call our sales department for weights and dimensions.
