

Plastic Mulch Layers - Specialty

PAN TYPE PLASTIC MULCH LAYER

adjustable to various plastic mulch widths and can work with our drip irrigation tape attachment and fumigation knives.

This was the original Kennco plastic mulch layer. It is the perfect mulch layer for growers who lay plastic in fields that have a lot of hills and valleys. It rides close to the back of the tractor and stays tight against the soil surface regardless of terrain. The stretching wheels and closing disks float up and down for this purpose.

Our pan type mulch layer carries a single roll of plastic mulch that rides freely on its rollers. The standard machine uses a flat roller that rides above the bed surface, rather than a crown roller which touches the bed. (Crown rollers are available as an option.) The pan type mulch layer is

Part #	Description
PS115	1 bed pan type plastic mulch layer, 54 in (137 cm) wide machine, up to 48 in (122 cm) mulch
PS117	1 bed pan type plastic mulch layer, 60 in (152 cm) wide machine, up to 54 in (137 cm) mulch
PS120	1 bed pan type plastic mulch layer, 72 in (183 cm) wide machine, up to 66 in (167 cm) mulch
PS121	1 bed pan type plastic mulch layer, 80 in (203 cm) wide machine, up to 74 in (188 cm) mulch
PS122	1 bed pan type plastic mulch layer, 90 in (228 cm) wide machine, up to 84 in (213 cm) mulch
PS133	Flat roller assembly for PS115
PS134	Flat roller assembly for PS117
PS124	Flat roller assembly for PS120
PS125	Flat roller assembly for PS121
PS126	Flat roller assembly for PS122
PS131	Crowned trailing roller for PS115
PS132	Crowned trailing roller for PS117
PS128	Crowned trailing roller for PS120
PS129	Crowned trailing roller for PS121
PS130	Crowned trailing roller for PS122

Custom row centers along with weights and dimensions are available by contacting our sales department. Category II hitches are standard. When ordering a pan-type machine, please specify plastic width, bed width and height, and row centers.
