

PLASTIC MULCH LIFTER

PS611

PS608

PS610

A plastic mulch lifter is used to remove mulch from the field. The side coulters align with the edge of the buried mulch and slice the weeds and other trash that hold the mulch in the soil. Properly adjusted, with a short top link on the three-point hitch, the plow points lift the mulch from the soil and shake the soil and weeds off of it. The lifter leaves the mulch lying loosely on top of the planting bed, making it easier to pick up for disposal. A center coultter is available to slice the mulch into two pieces. All coulters and plow points are adjustable to accommodate any size planting bed.

Also available is a mulch lifter with propane burners. It uses 2,000,000 BTU burners to vaporize the mulch as it is lifted from the soil. This is an excellent way to dispose of the mulch in the field. Our mulch lifters are also available as multiple row units.

Part #	Description
PS608	1 bed plastic mulch lifter
PS609	3 bed plastic mulch lifter
PS611	1 bed plastic mulch lifter with burners
PS610	Center coultter option

Customer must supply propane tank. Our standard plastic lifters fit a standard three-point Category II hitch. Call our sales department for weights and dimensions. Customization for your specific needs is always available by contacting our sales department.

IRRIGATION DRIP TAPE RETRIEVER

Our drip tape retriever is used by growers to pull and remove irrigation tape from the field for disposal or reuse. It includes a platform for a worker who supervises and guides the rolling of the tape and reloads the reels. It is powered by the tractor's hydraulic system and includes a flow regulator to speed up or slow down the reel speed.

Attached to the three-point hitch of a tractor, the retriever is moved from one bed to the next at the edge of the field. The operator attaches each line of tape to the reel and then supervises its collection.
