

STAKE CART AND STAKE DRIVER CART

PS300

Stake carts are useful for growers who specialize in tomatoes or other crops that require stakes. A stake cart attaches to a tractor and is loaded with tomato stakes. The cart extends to the side of the tractor over three planting beds so that workers have the stakes within easy reach for the bed where they are working.

PS325

Stake drivers are a tremendous labor-saving tool. Using an industrial air compressor and air-hammers, workers can drive stakes into soil mechanically. Using our stake driver allows your workers to set stakes much more quickly than driving them by hand.

A stake driver cart carries an air compressor (usually rented from a local industrial supply house). It includes booms that swing to the side and carry air lines to the air hammers. The hammers are suspended over the top of each planting bed, typically three to each side, for use by your workers. The stake driver cart can be built to carry stakes or follow a stake cart on a separate tractor.

Part #	Description
--------	-------------

PS300	Stake cart 28 ft
-------	------------------

PS325	Stake driver cart 36 ft
-------	-------------------------

Stake carts are towed by a tractor's drawbar. Call our sales department for weights, dimensions, and customization.

THREE-POINT HITCH MOUNTED LIFT BOOM

Our lift boom is a simple tool that every farmer should have. It hooks to the three-point hitch of your tractor and is an economical means of lifting equipment up to 2500 pounds. If you can't afford a forklift, and don't have a tractor with a bucket loader, this is a handy tool.

Part #	Description
--------	-------------

PS360	Three-point hitch mounted lift boom
-------	-------------------------------------

Our standard lift boom fits a standard three-point Category II hitch. Call our sales department for weights and dimensions. Customization is always available by contacting our sales department to express your specific needs and wishes.

FIELD HARVESTING CONVEYOR

A produce conveyor is a popular item among our customers that harvest crops such as lettuce or cabbage. The unit unfolds in the field and is pulled by a tractor's three-point hitch. Workers follow the conveyor and load it with the produce that they have harvested. Powered by the tractor's hydraulic system, the belt moves the produce across the conveyor to a second conveyor which lifts the produce to a truck or wagon moving beside it through the field. The conveyor can be folded for transport between fields and includes lighting for night or early morning operation.
